

SkyPath — Senior Traveller Persona

Persona profile • UX research synthesis • Clear and confidence-oriented airline booking

Persona type	Clarity-focused / confidence-oriented traveller
Primary context	Independent or assisted travel involving unfamiliar routes, airports or digital booking processes
Core motivation	Complete or manage a booking confidently without unnecessary complexity or uncertainty
Key priorities	Readable information, simple navigation, clear pricing, predictable steps, support and confirmation
Typical behaviour	Reviews information carefully and prefers straightforward choices over dense or ambiguous interfaces

Persona Snapshot

The Senior Traveller represents users who may prefer a slower, more deliberate booking experience with strong visual hierarchy, plain language and predictable navigation. The persona does not assume a particular medical condition or level of technical ability. Instead, it focuses on common usability needs that can become especially important when interfaces are dense, unfamiliar or time-sensitive.

The traveller benefits from being able to understand what has been selected, what happens next and where to obtain help when something is unclear. Confidence is therefore as important as speed.

Goals

- Search for suitable flights without unnecessary complexity.
- Read flight times, prices, stops, baggage and fare information comfortably.
- Understand each booking step before moving forward.
- Enter passenger information without confusion or avoidable errors.
- Review the booking clearly before payment.
- Know whether the booking was successfully completed.
- Find itinerary, support and post-booking information easily.

Behaviours & Decision Patterns

- Prefers clear and familiar terminology over technical or ambiguous language.
- May spend additional time checking important details before payment.
- Values visible confirmation of selected flight, date, passenger and fare information.
- Benefits from consistent placement of navigation and action controls.
- May prefer fewer choices presented at once when the decision is complex.
- Values easy access to assistance when something is unclear or unexpected.

Pain Points

- Small or dense text that makes important information difficult to read.
- Crowded screens with too many competing actions.

- Unfamiliar terminology or unexplained fare labels.
- Long forms with unclear required fields.
- Unexpected navigation changes or unclear next steps.
- Errors that are difficult to locate or correct.
- Weak confirmation states that create uncertainty about whether payment or booking succeeded.
- Difficulty locating customer support or post-booking information.

Needs from SkyPath

- Readable typography, spacing and strong information hierarchy.
- Simple, predictable navigation.
- Plain-language labels and explanations.
- Clear grouping of related booking information.
- Strong form labels, validation and error recovery.
- Visible progress through the booking journey.
- A comprehensive review and confirmation stage.
- Easy-to-find support and post-booking information.

Design Implications

The Senior Traveller reinforces the importance of clarity, predictability and confidence in the SkyPath experience. These requirements should be treated as core usability principles rather than as a separate simplified version of the product.

Persona need	Design implication
Readable content	Use clear type hierarchy, adequate sizing, spacing and strong contrast.
Simple navigation	Maintain consistent navigation and predictable placement of primary actions.
Plain language	Avoid unnecessary jargon and explain unfamiliar fare or service terminology.
Decision support	Present important comparison information without creating visual overload.
Form confidence	Use clear labels, required-field indicators and actionable error messages.
Progress awareness	Show where the traveller is in the booking journey and what remains.
Review confidence	Provide a clear summary before payment and an unmistakable confirmation afterwards.
Support access	Make help, booking details and post-booking actions easy to locate.

Representative User Need

“Give me clear information, let me move through the booking at my own pace, and make it obvious what I have selected and what happens next.”

Role in the SkyPath Design

The Senior Traveller acts as a secondary persona for evaluating readability, information hierarchy, navigation clarity, form usability, confirmation and support. It complements the Accessibility Persona while remaining focused on general usability, confidence and ease of comprehension rather than assuming a specific accessibility requirement.

Validation Direction

This persona should be validated through usability testing with older adults and other users who may benefit from increased clarity and reduced cognitive load. The current profile represents design hypotheses rather than claims about every senior traveller.
